Skylaunch Pulley Upgrade 2st July 2014

Skylaunch have developed a new design aluminium cable pulley assembly in cooperation with the British RAF GSA which directly replaces the top pulley in the pulley / roller heads for all clubs using synthetic cable.

The original lower plastic with steel hub pulleys can be retained, unless customers have a requirement to upgrade all their lower pulleys to aluminium.

The Aluminium units are designed to last longer than the plastic pulleys, and dissipate heat better.

The aluminium pulleys are fitted with a larger double row sealed bearing (spacers are supplied to reduce the bore allowing fitment of the original 20mm mounting bolt).

These assemblies only cost approximately 10% more than the original plastic with steel hub pulleys.
